DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 2 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Hanson 4,436,005.

Figure 2 of Hanson discloses a flat ended, double cube shaped element comprising a shaft having a handle end (11) and a working end, the shaft having a working inner portion (13) adjacent to the handle and a working outer portion (13a) adjacent to the working end, the working outer portion having a generally cube-shaped configuration of a first smaller size with a flat outermost tip being perpendicular to the shaft, the working inner portion having a generally cube-shaped configuration of a second larger size; and a shaft support (chuck of drill or other torque tool – column 3, lines 15-18) with a recess at one end to receive the handle end (11) of the shaft. Regarding Claim 5, Hanson discloses the shaft having opposed ends with working surfaces (11, 13a) at each end and a central section (13) having a square cross-sectional configuration with each working surface having a flat outermost tip being perpendicular to the shaft.

Allowable Subject Matter

3. Claim 1 is allowed.

4. Claims 3, 4 and 6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

5. Applicant's arguments filed 4-22-02 have been fully considered but they are not persuasive.

Applicant argues that Hanson does not show a tool which could be utilized manually without any power source. It is noted that this feature upon which applicant relies is not recited in the rejected claims. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993). Clearly, Hanson recites each and every element of recited Claims 2 and 5.

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Figure 3 of Bisbing et al. 4,258,596 discloses a driver having three circular sections (14, 13, 12) of different dimensions wherein the end portion of the driver is flat.

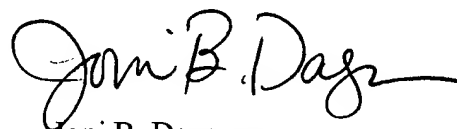

Art Unit: 3723

Fenton 4,380,942 discloses a driver having drive sections of graduating dimensions wherein the end portion of the driver is flat.
